

Pressure	Weather	Fishing	Fish Tactics
Unusually Low Barometer Reading	Rainy & Stormy Don't bother as there is no fishing.	Will be sluggish in this period.	Consider fishing deeper depth, as they are trying to get away from storm
High Barometer Reading	Clear, few clouds	They will find cover or deeper waters.	Work the hiding spots, like lily pads, also deeper waters.
Normal Barometer	Fair	Fish normal for the season	Don't be afraid to experiment with baits & lures
Falling Barometer	First part of fall is good fishing. After the fall continues for several hours, the more it goes down the poorer fishing will be.	Fish are loading up and active for the season	Use surface and shallow lures, again experiment
Slightly Lower	More than usual clouds	Fish tend to be aggressive; will come out from cover as clouds help shade their eyes.	Use surface and shallow lures, again experiment
Rising Barometer	Clearing or getting better weather	Fishing is best will be slightly more active then they have been.	Use brighter lures and work their cover, and work slightly deeper depths.
Day To Day	Intensity of activity also varies from day to day, according to condition. If the barometer happens to be steady or rising, the temperature is favorable (15 degrees higher than the water temp) then long and active response to solunar period can be expected
